PROFESSIONAL SUMMARY

Entry-level Network Engineer candidate pursuing a B.Tech in Computer Science, with hands-on Cisco Packet Tracer lab practice in IPv4 subnetting, VLANs, routing and switching, and basic troubleshooting. Familiar with Linux, Kali Linux, Wireshark, Nmap, and core network security principles, supported by Cisco Networking Basics training, cybersecurity coursework, and practical cybersecurity labs. Seeking to support network operations and infrastructure support while growing in enterprise networking, wireless, and firewall administration.

TECHNICAL SKILLS

Networking Fundamentals: OSI and TCP/IP models; IPv4 addressing, subnetting, CIDR; TCP, UDP, DNS, DHCP, ARP, ICMP, NAT; LAN, WAN, WLAN, Ethernet
Routing & Switching: Router and switch configuration fundamentals; basic topology design; VLANs, trunking, inter-VLAN routing; STP/RSTP, VTP, EtherChannel; static routing; introductory OSPF, RIP, EIGRP, BGP; HSRP and VRRP concepts
Wireless Networking: IEEE 802.11 fundamentals; wireless access points, SSIDs, authentication concepts; basic wireless connectivity and troubleshooting
Network Security: Firewall fundamentals and access-control policies; VPN and IPsec concepts; network segmentation and secure configuration; foundational vulnerability assessment and reconnaissance; awareness of Palo Alto Networks, Fortinet, Check Point, Sophos, SonicWall
Troubleshooting & Tools: Cisco Packet Tracer; Wireshark packet analysis; Nmap (authorized labs); Linux networking commands; ping, traceroute, IP configuration, basic fault isolation
Programming & Operating Systems: Python fundamentals; Linux and Kali Linux; Windows; Git and GitHub

PROJECTS & LAB EXPERIENCE

Network Simulation Labs — Cisco Packet Tracer

- Designed network topologies with simulated routers, switches, and end devices.
- Practised IP addressing, subnetting, and VLAN-based network segmentation.
- Explored router and switch functionality and routing concepts; learned how components communicate within a LAN.
- Identified and resolved basic connectivity issues in simulated network environments.

Network Security & Traffic Analysis

- Practised network reconnaissance and service discovery with Nmap in authorized lab environments.
- Analyzed packet captures in Wireshark to understand network protocol communication.
- Studied network exposure, common vulnerabilities, and basic defensive security practices.

Python-Based Network Security Project

- Explored development of a Python tool for basic network and service checks.
- Applied Python fundamentals to network security learning, including how automation supports repeatable checks in authorized testing environments.

CYBERSECURITY LAB EXPERIENCE

- Completed 20+ TryHackMe rooms and Capture the Flag (CTF) challenges.
- Developed familiarity with Linux commands, networking concepts, reconnaissance, and cybersecurity fundamentals.
- Practised analytical problem-solving and a structured approach to investigating lab-based issues.

CERTIFICATIONS & TRAINING

- Cisco Networking Basics — Cisco Networking Academy
- Cisco Cybersecurity Course — Cisco
- Cyber Analyst Job Simulation — Tata Group
- Cybersecurity Job Simulation — Deloitte Australia

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering | JNTU | Expected Graduation: 2027

CORE COMPETENCIES

Analytical and logical problem-solving | Basic network troubleshooting | Technical learning and adaptability | Attention to detail | Team collaboration | Technical documentation
